## **AMENDMENTS TO THE CLAIMS**

Docket No.: H0498.70179US00

1. (Currently amended) A method of selectively depositing a material on a substrate including a contoured surface including a protrusion and a recess, the method comprising:

applying a first fluid to the contoured surface of the substrate;

allowing the first fluid to distribute across a portion of the contoured surface such that the first fluid contacts the protrusion and not the recess; and

allowing a first material to deposit <u>from the first fluid</u> on the substrate <del>where the substrate is in contact with <u>on</u>-the <u>first fluid protrusion</u>.</del>

2. (Currently amended) The method of claim 1, further comprising:

applying a second fluid to the contoured surface of the substrate;

allowing the second fluid to distribute across a portion of the contoured surface such that the second fluid contacts the recess; and

allowing a second material to deposit <u>from the second fluid</u> on the substrate <del>where the substrate is</del> in <del>contact with the second fluid recess</del>.

- 3. (Currently amended) The method of claim 2, further comprising: applying a third fluid to the contoured surface of the substrate; allowing the third fluid to distribute across a portion of the contoured surface; and allowing a third material with an affinity for one of the first material and the second material to deposit <u>from the third fluid</u> on the substrate only where the one of the first material and the second material is deposited.
- 4. (Original) The method of claim 3, wherein the first material is a protein.
- 5. (Original) The method of claim 4, wherein the second material is a protein.
- 6. (Original) The method of claim 5, wherein the first material is cytophobic.

Docket No.: H0498.70179US00

- 7. (Original) The method of claim 6, wherein the second material is cytophilic.
- 8. (Original) The method of claim 7, wherein the third material is a cell.
- 9. (Original) The method of claim 1, wherein the recess comprises a microwell.
- 10. (Original) The method of claim 9, wherein the microwell is less than 1 millimeter in width and depth.
- 11. (Original) The method of claim 10, wherein the microwell is less than 100 micrometers in width and depth.
- 12. (Original) The method of claim 11, wherein the microwell is less than 50 micrometers in width and depth.
- 13. (Original) The method of claim 1, wherein the protrusion comprises a microprotrusion.
- 14. (Original) The method of claim 13, wherein the microprotrusion is less than 1 millimeter in width and height.
- 15. (Original) The method of claim 14, wherein the microprotrusion is less than 100 micrometers in width and height.
- 16. (Original) The method of claim 15, wherein the microprotrusion is less than 50 micrometers in width and height.
- 17. (Original) The method of claim 1, wherein the substrate comprises a flexible material.

18. (Original) The method of claim 1, wherein the substrate comprises a polymer.

5

- 19. (Original) The method of claim 18, wherein the substrate comprises polydimethylsiloxane.
- 20. (Currently amended) The method of claim 1, wherein the recess substrate comprises a plurality of recesses.
- 21. (Currently amended) The method of claim <del>20</del>-<u>22</u>, wherein the protrusion comprises a portion of the substrate between the recesses.
- 22. (Currently amended) The method of claim 1, wherein the protrusion substrate comprises a plurality of protrusions.
- 23. (Currently amended) The method of claim 22-20, wherein the recess comprises a portion of the substrate between the protrusions.
- 24. (Original) The method of claim 1, wherein the first fluid has an advancing angle of greater than about 90°.
- 25. (Currently amended) The method of claim +3, wherein at least one of the second fluid and the third fluid has an advancing angle of less than about 90°.
- 26. (Original) A method, comprising:

selectively depositing a protein on an outward-facing portion of a protrusion of a contoured surface including a protrusion and a recess, at least on of the protrusion and recess having a maximum lateral dimension of no more than about 1 mm, while leaving the recess free of the protein.

27. (Original) A method of selectively depositing a material on a substrate having a contoured surface including a protrusion and a recess, the method comprising:

Docket No.: H0498.70179US00

applying a fluid to the contoured surface without urging the fluid against the surface mechanically, and allowing the fluid to contact the protrusion and not the recess; and allowing a first material to be deposited from the fluid onto the protrusion but not the recess.

- 28. (Withdrawn) A cell containment device, comprising: a substrate including a contoured surface including a protrusion and a recess; a cytophobic material connected to the protrusion; and a cytophilic material connected to the recess.
- 29. (Withdrawn) The cell containment device of claim 28, wherein the substrate comprises a flexible material.
- 30. (Withdrawn) The cell containment device of claim 28, wherein the substrate comprises a polymer.
- 31. (Withdrawn) The cell containment device of claim 30, wherein the substrate comprises polydimethylsiloxane.
- 32. (Withdrawn) The cell containment device of claim 28, wherein the recess comprises a plurality of recesses.
- 33. (Withdrawn) The cell containment device of claim 32, wherein the protrusion comprises a portion of the substrate between the recesses.
- 34. (Withdrawn) The cell containment device of claim 28, wherein the protrusion comprises a plurality of protrusions.

35. (Withdrawn) The cell containment device of claim 34, wherein the recess comprises a portion of the substrate between the protrusions.

Docket No.: H0498.70179US00

## 36. (Withdrawn) An article, comprising:

a contoured surface including at least one protrusion and at least one recess, and a cytophilic agent on the surface within the recess, the surface at the protrusion being free of the cytophilic agent.

37. (Withdrawn) The article of claim 36, further comprising a cytophobic agent on the surface at the protrusion.

## 38. (Withdrawn) An article, comprising:

a contoured surface including a plurality of protrusions and recesses, and at least one cell in at least one recess, wherein the at least one recess has a maximum lateral dimension of 500µm.

## 39. (Withdrawn) An article, comprising:

a contoured surface including a plurality of protrusions and recesses, and a single cell in at least one recess.
